Max Subset Sum No Adjacent

AlgoExpert · Medium · Dynamic Programming

The problem

- Max sum of positive ints with no two chosen elements adjacent.

Intuition

- At each index, either take it plus the best up to two back, or skip it.

Approach

- 1. Keep the best up to i minus one and i minus two
- 2. Choose the max of skip or take
- 3. Slide forward

Java solution

```java
public class MaxSubsetSumNoAdjacent {
    public static int maxSubsetSumNoAdjacent(int[] a) {
        int prev = 0, cur = 0;
        for (int x : a) { int next = Math.max(cur, prev + x); prev = cur; cur = next; }
        return cur;
    }
}
```

Complexity

- Time: O(n)
- Space: O(1)

Recap

- At each index, either take it plus the best up to two back, or skip it.
- Complexity: O(n)
